Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Silicone fluids are generally colorless transparent liquids. They exhibit excellent resistance to heat, cold, and moisture. There is also little viscosity change in silicone fluids over a wide temperature range, and they have outstanding electrical properties. In addition, they are notable for their characteristics of mold-releasability, water repellency, lubricity, and defoaming properties. Silicone fluids are ideal for use as hydraulic or transformer oils, damping liquids, diffusion pump fluids, thermally resistant lubricants, dielectrics, defoamers and release agents for high-performance digital printing machines. They can also be used for the hydrophobic treatment of glass and mineral wool.
