According to our LPI (LP Information) latest study, the global Silicone in Electric Vehicles market size was valued at US\$ million in 2023. With growing demand in downstream market, the Silicone in Electric Vehicles is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Silicone in Electric Vehicles market. Silicone in Electric Vehicles are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Silicone in Electric Vehicles. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Silicone in Electric Vehicles market.

Silicone offers better temperature obstruction at both low and high temperatures in contrast with other rubbers. It can withstand a lower temperature limit of up to - 40C and higher temperature limit of up to 150C. The temperature resistant property displayed by silicone augments its application scope in electric vehicles. These helpful properties of silicone are probably going to drive the demand in various structures for use in electric vehicles over the coming years. In any case, natural rubber substitutes are anticipated to represent a danger to the demand for silicone, which may test the utilization of the items in electric vehicle.

Global EV sales continued strong. A total of 10,5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe

emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
