Silicone-modified polymer sealant is a specially formulated sealant that is usually composed of silane-modified polymer and other additives. It combines the advantages of silicone sealant and polymer sealant and has good weather resistance, chemical resistance, high temperature resistance and water resistance. Silicone-modified polymer sealants are commonly used in sealing and bonding applications in construction, automotive, aerospace, electronics and other fields. Due to its excellent performance, it is often used in sealing doors and windows, glass curtain walls, automotive glass, pipe connections and other occasions. Compared with traditional silicone sealants, silicone-modified polymer sealants generally have better bonding properties and weather resistance, while also being easier to apply and process. The type and performance of silicone-modified polymer sealants can vary according to different formulations and production processes. Generally speaking, products with different hardness, viscosity and curing speed can be selected according to specific usage requirements.
