## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Silicone release film has superior release effect and good economy, but it may not be suitable for some delicate industrial processes that need to avoid silicone contamination. In addition, silicone oil may cause troubles in some subsequent processes (such as printing), such as ink is difficult to adhere.

Non-silicone release film avoids the problem of silicone contamination, so it performs well in coating and high temperature environments. It is one of the preferred materials in high-end applications. In addition, non-silicone release agents may have better compatibility in some processes, reducing interference with subsequent processes.

The global Silicone and Non-silicone Release Films market size is projected to grow from US\$ 7469 million in 2024 to US\$ 9647 million in 2030; it is expected to grow at a CAGR of 4.4% from 2024 to 2030.
