Silicone insulators are polymer-based electrical insulation components primarily used in power transmission and distribution systems. These products exhibit excellent resistance to pollution, moisture, UV radiation, and extreme temperatures, maintaining stable insulation performance even in complex outdoor environments. They are widely used in overhead transmission lines, substations, and new energy facilities. The silicone insulator industry chain includes upstream high-purity silicone, glass fiber core rods, metal connectors, and functional additives; midstream processes such as molding, vulcanization, assembly, and electrical performance testing; and downstream applications in power grid systems, substations, railway electrification projects, and new energy projects, along with supporting installation, inspection, and maintenance services. In 2025, global silicone insulator production was approximately 60.8 million units, with a global average market price of approximately US\$25 per insulator. The gross profit margin of major companies in the industry ranged from 30% to 55%. In 2025, global silicone insulator production capacity was approximately 80 million units.
