Silicone sponge tubing is a hollow tubular product extruded from expanded silicone rubber. It features lightweight, softness, high elasticity, high and low temperature resistance, UV resistance, chemical resistance, and excellent insulation properties. Its internal structure is either closed-cell or open-cell foam, giving it excellent cushioning and sealing properties. Silicone sponge tubing is widely used in industrial sealing, electronic insulation, medical devices, food processing, automotive manufacturing, and other fields, particularly in high-temperature environments or where long-term stability is required. Compared to solid silicone tubing, sponge tubing is lighter and more flexible, making it suitable for functional applications such as filling, protection, shock absorption, and thermal insulation.
