The global Silicone Thermal Conductive Sheet market size is predicted to grow from US\$ 11210 million in 2025 to US\$ 14570 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

Thermal conductive sheet is an ultra-thin thermal interface material in the form of a thin film. It is produced by dispersing and mixing the thermally conductive powder in silicone resin, which has an excellent heat resistance and electrical insulation properties. Its excellent flexibility and elasticity secure good adhesion to heat source and high heat conduction effect.

Silicone Thermal Conductive Sheets are innovative materials highly favored in the field of electronics and thermal management. With the ongoing trend towards miniaturization and higher performance in electronic products, thermal management has become increasingly critical. Silicone Thermal Conductive Sheets have gained significant attention due to their outstanding thermal conductivity and excellent insulating properties. They efficiently conduct heat and prevent thermal coupling between electronic components, thereby enhancing the stability and reliability of devices. Market trends indicate a continuous growth in the demand for Silicone Thermal Conductive Sheets in sectors such as electronics, communications, automotive electronics, and industrial applications. This is because an increasing number of electronic devices require efficient heat dissipation solutions to ensure stable operation under high loads and temperatures.
