Silver cadmium oxide (AgCdO) has been the material of choice for electrical contacts used in different low voltage equipment of the contactor type because of its excellent functional properties: high electrical and thermal conductivity, high arc resistance, high

solder adhesion , low contact resistance, high hardness and strength, and therefore low erosion during closing and braking operations. The two most common production routes for silver cadmium oxide contact materials are based on powder metallurgy (PM) and internal oxidation (IO) of Ag-Cd alloys. Cadmium and cadmium oxide are not good for health and environment, silver cadmium oxide material is banned by some countries
