Photovoltaic silver paste is a kind of electronic conductive paste. The conductive phase is silver powder, and the adhesive phase and liquid carrier are composed of glass powder and organic raw materials. It is printed on both sides of the photovoltaic silicon chip to conduct electricity. It is the core material for the production of metal electrodes of photovoltaic cells, accounting for about 10% of the cost of photovoltaic cells, second only to silicon chips. The performance of photovoltaic silver paste directly affects the series resistance of the cells, and then affects the conversion efficiency of the cells. This report studies the silver paste of photovoltaic cells on the main grid.
