The global Silver Recycling and Recovery Service market size is predicted to grow from US\$ 587 million in 2025 to US\$ 776 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Silver recycling and recovery service refers to the commercialization of extracting, refining, and reproducing high-purity silver or silver compounds from silver-containing waste, by-products, or discarded products using specialized technologies and processes. Its core objective is to reintegrate silver resources into the economic cycle, reduce dependence on primary minerals, lower environmental burdens, and simultaneously create economic value for clients. Demand is primarily driven by both the resource utilization of industrial waste and the security of the strategic precious metals supply chain. Its upstream supply chain covers the generation of silver-containing waste, including waste and by-products from industries such as electronics manufacturing, photovoltaics, electroplating, medical imaging, and jewelry processing; the downstream extends to industries directly applying refined silver, such as electronic component manufacturing, new energy, jewelry, investment silver bars, and medical imaging. As a key node in the circular economy, this service, through technological and large-scale processing of 'urban mining,' transforms scattered waste into standardized industrial raw materials, alleviating resource pressure on primary silver mines. In 2025, the average price of silver recycling and recovery service is closely related to the silver content, form, purity of the raw materials, and international silver prices, at approximately US\$600 per kilogram, with a gross profit margin of approximately 20%.
