Simple filtration devices pass liquids containing pollutants through perforated filtration materials such as paper, cloth, wire mesh, glass cotton, sand, and synthetic fibers.

Filtration devices clean liquids by passing them through perforated filter media such as paper, cloth, wire mesh, glass cotton, sand, and synthetic fibers, separating out individual particles that are larger than the pores.

Physical forces such as gravity, pressure, vacuum, and centrifugal force are sometimes used to facilitate filtration, but the most economical and convenient method is to use a coagulation

The most economical and convenient method is to simply flow the wastewater through a filter and separate it into solids and liquids.
