Simply Allulose is the epimer corresponding to the third carbon of D-fructose. Simply Allulose has 70% the sweetness of granulated sugar, but has almost no calories, so it can be used as a low-calorie sweetener. Simply Allulose has the advantages of high sweetness, good solubility, low calorie and low blood sugar response, and is considered as one of the most ideal sucrose substitutes. Adding Simply Allulose to food can not only improve its gelling degree, but also improve its flavor through Maillard reaction with food protein. Compared with D-fructose and D-glucose, Simply Allulose can generate more antioxidant Maillard reaction products and maintain the antioxidant level of food for a longer time.

The global Simply Allulose market size is projected to grow from US\$ 232.7 million in 2023 to US\$ 417.7 million in 2030; it is expected to grow at a CAGR of 8.7% from 2024 to 2030.

Global prevalence of diabetes and obesity coupled with increasing demand for sugar substitutes is expected to drive the expansion of the global D-psicose market over the forecast period. More than 30 million people in the United States are currently diagnosed with diabetes. This number is expected to reach epidemic proportions by 2030. Obesity is a global epidemic with an estimated prevalence of over 37%, according to the World Health Organization. The prevalence of type 2 diabetes is even higher, around 60%. These diseases represent a growing health crisis in the United States and around the world. Diabetes can lead to blindness, kidney failure and amputations. It also increases the risk of death from any cause by about 25%. The NDS is a comprehensive plan to reduce the incidence and severity of diabetes by 2030. The global market for low-calorie sweeteners is expected to develop over the next few years owing to growing demand and adoption across several end-use industries, including the food and beverage industry. The global market for D-psicose is also expected to benefit from increased R&D initiatives by various key industry players across the globe to develop and improve sugar-free products during the forecast period. Other major factors influencing the rapid expansion of the market are changing consumer preferences and growing popularity of 'clean label' products across the globe. One of the major drivers of the global D-Plicose market is the rising prevalence of psychiatric disorders such as anxiety and depression. These mental illnesses are becoming more common due to lifestyle changes, increased stress levels, and other factors. Moreover, growing geriatric population is another factor driving the growth of the global D-psicose market. This is because older adults are more likely to suffer from a variety of mental health problems than younger adults. The Alzheimer's Association estimates that by 2023, approximately 5.4 million Americans will be living with dementia. About one-third of people with dementia are aged 85 or older. About 60 percent of people who develop the disease before age 65 have it because they have a genetic form of the disease. Alzheimer's risk increases with each decade after your 50th birthday: About 25 percent of people age 85 or older have the disease, compared with 10 percent of people ages 55 to 64 suffer from this disease. Global D-Psicose Market. Restraints for the growth of

the D-psicose market include high production costs and limited effective therapeutic options. However, growth opportunities for this market are manifold owing to the increasing adoption of novel psychiatric drugs.
