The global Single-acting Spring Return Actuator market size is predicted to grow from US\$ 22.40 million in 2025 to US\$ 33.42 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2025, global sales of single-acting spring return actuators reached 124,000 units, with an average selling price of US\$185 per unit. Total production capacity was approximately 160,000 units per year, and gross profit margin remained between 28% and 33%. This product mainly consists of a cylinder body, piston, spring, seals, and connection ports. It employs a single-acting structure, using a spring to achieve the return function. It is commonly used in automation equipment, valve control systems, hydraulic and pneumatic control devices, etc., to achieve simple and reliable return operation and safety protection.

Upstream raw materials include steel, spring steel wire, seals, and auxiliary parts. Downstream suppliers mainly include automation machinery manufacturers, valve manufacturers, hydraulic system integrators, and industrial equipment maintenance companies.

With the increasing level of industrial automation, the widespread adoption of intelligent production lines, and rising requirements for energy conservation and environmental protection, the demand for reliable, high-precision, and fast-response single-acting spring return actuators continues to grow. Future development can be achieved by optimizing spring design, enhancing wear resistance, expanding the applicable pressure range, and providing customized actuator solutions to meet the needs of different operating conditions, thereby increasing market share and profitability.

The single-acting spring return actuator market is showing a steady growth trend, primarily driven by industrial automation upgrades, the widespread adoption of hydraulic and pneumatic control systems, and increasing demands for smart manufacturing. As production equipment demands higher reliability, rapid response, and safety protection, single-acting spring return actuators, with their advantages of simple structure, low cost, convenient maintenance, and reliable reset, have become crucial actuators in automated machinery, valve control, and fluid transport systems.

Simultaneously, downstream industries, including machinery manufacturing, petrochemicals, energy, and water treatment, are experiencing a significant increase in demand for actuators with high pressure resistance, high temperature resistance, and long-term stable operation. Technological development is diversifying, including high-performance spring materials, corrosion-resistant surface treatments, modular design, and intelligent monitoring integration to improve service life and system reliability. Regionally, North America and Europe favor high-precision, high-reliability products, while the Asian market is primarily driven by demand for cost-effective products.

Overall, with the continued improvement in industrial automation and energy conservation and environmental protection requirements, the single-acting spring return actuator market still possesses stable growth potential and new business opportunities arising from technological upgrades.
