The single axle cable hoist is a cable-type lifting system mounted on a single rear axle truck chassis, designed for handling and loading and unloading slidable containers (such as roll-off garbage containers, construction waste containers, etc.). It uses a hydraulically driven steel cable system to pull the container on the ground to the vehicle body track, or unload it smoothly. Compared with the double-axle system, the single-axle cable hoist has a more compact structure and lighter weight, with stronger urban traffic capacity and fuel economy. It is particularly suitable for use in narrow streets, residential areas or areas with strict gross weight restrictions in cities. Its load capacity is generally between 10-20 tons, and it can be equipped with an automatic locking hook, remote control system and short track structure to improve operational efficiency and safety. It is widely used in small construction sites, urban garbage sorting and transportation, garden waste collection and other scenarios. It is an economical and efficient choice for small and medium-sized solid waste transportation fleets.
