The single axle outside rail hoist is a material loading system mounted on a single-axle chassis vehicle. It uses an outer rail structure to arrange the cable or hook arm lifting mechanism on both sides of the frame to achieve rapid loading and unloading of containers, garbage bins or material boxes. This type of hoist has a compact structure and is easy to operate. It is particularly suitable for light-duty transportation operations in space-constrained areas such as urban streets. The single-axle configuration means that the vehicle has only one drive shaft, which is suitable for small and medium-tonnage tasks (usually 6-12 tons) and has good maneuverability and fuel economy. Because the outer rail design improves the box support stability and lifting efficiency, it is widely used in municipal sanitation, landscaping, property management and small engineering construction. Its advantages lie in the wide range of chassis adaptation, simple structural maintenance, and high system integration. It is one of the mainstream low-tonnage solutions in the current urban solid waste transfer and movable box scheduling.
