Single-beam photoelectric safety switches, also known as through-beam photoelectric safety switches, are non-contact safety sensors used to protect hazardous areas. They consist of a transmitter and receiver facing each other, producing an invisible beam of light.The transmitter produces a beam of light that is directed at the receiver. If this beam is interrupted by an obstacle, such as a hand or object, the receiver detects the interruption and triggers an alarm or protective action.Single beam safety light curtains are often used in areas where a quick response to the interruption of the light beam is required to prevent injury or damage. They are used, for example, in industrial manufacturing, warehousing, logistics or robotics.Modern single-beam safety light
