The single-knife shearing machine is a mechanical equipment used in the textile industry, mainly used for shearing wool, cashmere and other fibers. It trims the hair on the fiber surface into a certain length by a single-knife shearing method to achieve a clean and uniform shearing process. This equipment is usually used in the relative motion state of wool and cashmere, which helps to improve the quality of the fiber and the subsequent processing effect. The working principle of the single-knife shearing machine is to shear through the relative motion between the knife and the fiber, which can achieve efficient and accurate shearing process.
