The global Single Board Computer (SBC) market size is predicted to grow from US\$ 2221 million in 2025 to US\$ 2955 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

A single-board computer (SBC) is any complete computer that is built on a single circuit board and contains functional computer components including the microprocessor, input/output (I/O) and memory. SBC computers typically provide a fanless, low-power computing solution and a low profile architecture.

The size of an SBC can vary from about the size of a credit card to that of a video game console. They are often incorporated into larger devices such as automatic teller machines, industrial and medical equipment, or robotic devices. Since the mid 2000s, inexpensive single board computers have been used by educators and hobbyists.

Unlike a desktop personal computer, single board computers often did not rely on expansion slots for peripheral functions or expansion. Some single-board computers are made to plug into a backplane for system expansion. Single board computers have been built using a wide range of microprocessors. Simple designs, such as built by computer hobbyists, often use static RAM and low-cost 8 or 16 bit processors. Other types, such as blade servers, include all the memory and processor performance of a server computer in a compact space-saving format.

The major players in global Single Board Computer (SBC) market include AAEON, Advantech, ADLINK, etc., and the market concentration rate is low. China and Japan

are main markets, they occupy about 50% of the global market. cCPI is the main type, with a share about 30%. Industrial Automation is the main application, which holds a share over 30%.
