The single centrifugal fan blade is a centrifugal fan blade, which is characterized by being composed of a single blade and a wheel disc. It is usually made of metal materials, such as steel, stainless steel, etc., with high strength and durability. The working principle of the single-link centrifugal fan blade is to rotate the wheel disk through the drive of the motor, thereby generating centrifugal force. Centrifugal force pushes the air toward the blades, causing the blades to rotate and pull the air into the center of the blades, where it is then discharged through the outlet. Single centrifugal fan blades usually have higher air volume and pressure output capabilities and are suitable for applications requiring larger air volume and higher air pressure.
