The global Single-chip DLP Laser Projector market size is predicted to grow from US\$ 1943 million in 2025 to US\$ 2807 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Single-chip DLP laser projectors are projection devices that utilize single-chip Digital Light Processing (DLP) technology combined with a laser light source. These projectors achieve rapid switching and efficient blending of red, green, and blue light through a single DLP chip, delivering high resolution and fine image quality. The laser light source enhances the device with features such as high brightness, extended lifespan, and low maintenance costs. Compared to multi-chip DLP systems, single-chip DLP laser projectors have a more compact design and lower cost, making them ideal for education, business presentations, small-scale theaters, and other applications requiring high image quality within a limited budget.
