A single-coil guitar pickup, also known as a single-coil pickup or single-coil pickup, is a type of electro-acoustic pickup used on guitars. It usually consists of a solenoid wrapped around a magnetic core. When the guitar's strings make sound, they induce changes in the magnetic field on the pickup, which creates an electrical signal. This electrical signal is transmitted to a guitar amplifier or other audio device, allowing the guitar's sound to be amplified or recorded. Advantages of single-coil guitar pickups include simplicity of construction, lower cost, producing a clear sound and preserving traditional tone. However, they can also be affected by electromagnetic interference and may produce noise at high volumes. There are many different types and brands of single-coil guitar pickups on the market to suit the needs and preferences of various musicians.

The global Single Coil Guitar Pickup market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
