Single core PV cable is a cable used in solar photovoltaic power generation systems that consists of a single conductor. Single core PV cables are designed to connect photovoltaic modules (solar panels) to photovoltaic inverters or other system components, transmitting the DC power generated by the solar panels. Single core PV cables usually use copper or aluminum as the conductor material, and wrap the conductor with polyethylene (PE) or cross-linked polyethylene (XLPE) insulation material. They have flame retardant properties and aging resistance, and play an important role in solar photovoltaic power generation systems.
