Single cylinder injection pump is a type of fuel injection system used in diesel engines. It operates by pumping high-pressure fuel into the engine cylinder at the right time to ignite and combust the fuel. The pump consists of a plunger that is driven by a camshaft, which pushes the fuel through a high-pressure line and into the cylinder. The pump is designed to deliver the precise amount of fuel the engine needs to operate efficiently. Single cylinder injection pumps are commonly used in small diesel engines for applications such as generators, small boats, and agriculture equipment.
