Single cylinder wings are a smart design that allows a cylinder to nest deep inside them.

Single-cylinder wings, often referred to as donut wings, are oval-shaped air cells or bladders that are not permanently attached to a harness. While single-cylinder wings have their origins in the realm of technical diving, they are becoming very popular in the recreational community. Not only are these single-cylinder wings streamlined, but due to their shape being a continuous loop, they are very stable underwater. There is no dramatic shift of air from left to right.
