Single element hollow cathode lamp is a light source device used in atomic absorption spectroscopy, specifically designed to emit narrow-band spectral lines of a particular element. It consists of a hollow cathode and an inert gas filling, with the cathode typically made of the target element or its compounds. During operation, the cathode interacts with ions produced by gas discharge, exciting the atoms of the specific element to emit their characteristic spectral lines. Known for its high sensitivity, narrow linewidth, and excellent stability, the single element hollow cathode lamp is widely used in trace element analysis and various laboratory and industrial applications.
