IR Heating Lamp is a body with a higher temperature which transfers energy to a body with a lower temperature through electromagnetic radiation. Depending on the temperature of the emitting body, the wavelength of the peak of the infrared radiation ranges from 750 nm to 1 mm. No contact or medium between the two bodies is needed for the energy transfer. Single ended means that the lamp has one end that is connected to a power source, while the other end is left open. This is in contrast to double-ended lamps, which have connections at both ends. Single-ended lamps are typically easier to install and replace.

The global Single Ended IR Heating Lamp market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
