The global Single-Engine, Two-Seat Carbon Fiber Composite Light Sport Aircraft market size is predicted to grow from US\$ 1198 million in 2025 to US\$ 1720 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

The single-engine two-seat carbon fiber composite light sport aircraft is a light aircraft made of carbon fiber composite materials. It is mainly designed for personal recreational flying, training or short-distance transportation. The aircraft is usually powered by one engine and has two seats for the pilot and passenger. Due to the use of carbon fiber composite materials, this aircraft is lighter and stronger than traditional metal structure aircraft, and has higher performance and efficiency. It usually has a smaller body size and flexible maneuverability, suitable for operation at short take-off and landing sites, and is a popular personal aircraft and flight training tool.

At present, light sport aircraft are developing rapidly abroad, but they are still in their infancy in our country. Therefore, how to reduce the manufacturing cost of light aircraft during the manufacturing process has become a key issue in the current manufacturing of light sport aircraft. According to the experience of Western developed countries in manufacturing light sport aircraft, the use of carbon fiber composite materials is currently one of the effective ways to reduce the construction cost of light sport aircraft. Therefore, it is of great significance to study the application of carbon fiber composite materials in light aircraft structures.
