Single envelope worm gear is a transmission device consisting of a worm and a worm gear. A worm is a helical gear, and a worm gear is a gear that meshes with the worm. Their special gear shape enables single-envelope worm gear transmission to have high reduction ratios and large torque output capabilities

As industrial automation advances and the demand for efficient transmission systems increases, single-envelope worm gears will continue to be favored by the market as a reliable and high-torque transmission option. In addition, the demand for flip-chip designed single-envelope worm gears in limited space and special applications is also expected to grow. As technology continues to advance and demand for higher-performance, more energy-efficient transmission systems increases, the single-

envelope worm gear market is expected to maintain a steady growth trend.
