Abstracts

The global Single-layer Plastic and Single-layer Silicone Release Paper market size is predicted to grow from US$ 2732 million in 2025 to US$ 4249 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2024, global sales of Single-layer Plastic and Single-layer Silicone Release Paper reached 3.2 billion square meters, with an average selling price of US$0.82 per square meter. Single-layer Plastic and Single-layer Silicone Release Paper is a functional release material made from glassine or CCK paper as the base material, coated with silicone oil on one side and laminated with PE on the other. It possesses characteristics such as high stiffness, high temperature resistance, and stable peel strength, and is widely used in labels, pressure-sensitive adhesive products, electronic tapes, optoelectronic materials, and medical patches. Global total production capacity is approximately 4.5 billion square meters per year, with an average gross profit margin between 14% and 20%. The main upstream raw materials include wood pulp, glassine base paper, silicone oil, curing agent, and PE resin; typical consumption breakdown is as follows: wood pulp/base paper accounts for approximately 52% of the cost, silicone oil system accounts for 18%, PE laminating material accounts for 16%, and the remainder is energy consumption and processing aids. In the downstream consumption structure, labels and electronic tapes account for approximately 58% combined, medical patches approximately 12%, and optoelectronic materials approximately 10%. The future lies in thinner profiles, lower silicon transfer, higher cleanliness, and higher temperature resistance systems to meet the rapidly growing demands of new energy batteries, semiconductor packaging, flexible displays, and high-end medical devices. Demand is driven by increased global label automation, expansion of e-commerce and logistics, upgrades to consumer electronics structural films, and the incremental demand for highly stable release materials in photovoltaic backsheet and lithium
