The report requires updating with new data and is sent in 48 hours after order is placed.

The global Single Mode Laser Diode market size is predicted to grow from US$ 311 million in 2025 to US$ 513 million in 2031; it is expected to grow at a CAGR of 8.7% from 2025 to 2031.

Laser diodes are electrically pumped semiconductor lasers in which the gain is generated by an electrical current flowing through a p–n junction or (more frequently) a p–i–n structure. In such a heterostructure, electrons and holes can recombine, releasing the energy portions as photons. This process can be spontaneous, but can also be stimulated by incident photons, in effect leading to optical amplification, and with optical feedback in a laser resonator to laser oscillation. A blue laser diode emits electromagnetic radiation with a wavelength between 405 and 483 nanometres, which the human eye sees as blue or violet. A single mode blue laser diode has only one mode of light to propagate.

This report includes the Single-Mode Blue Laser Diode wavelength (400nm~483nm) and it don’t includes the data of Blue Laser Diode module or Blue Diode Laser.

The industry is concentration, the key brand include Sony, Nichia, Sharp, Osram Opto Semiconductors, TOPTICA Photonics Inc, Egismos Technology Corporation and Ondax. These companies occupied more than 90% market share by revenue. Japan is the largest consumption place, with a consumption market share nearly 56%, Following Japan, Europe is the second largest consumption place with the consumption market share of 17%.
