Single-mode low-loss MPO is a multi-core fiber optic connector assembly based on single-mode fiber. It utilizes high-precision MT ferrules and an optimized fiber arrangement to achieve low insertion loss and high return loss performance. It is typically used in data centers, high-speed optical communication networks, cloud computing, and 5G bearer networks, where transmission efficiency and signal stability are extremely demanding. Its upstream suppliers primarily include suppliers of raw materials and components such as high-performance optical fiber preforms, single-mode optical fiber, MT ferrules, ceramic materials, glues, and precision molds. Its downstream suppliers include optical module manufacturers, fiber optic cabling system integrators, data center operators, and communications equipment suppliers. These suppliers utilize single-mode low-loss MPO in high-speed interconnects and large-scale fiber optic cabling to meet the network's demands for high bandwidth, low latency, and high reliability.In 2024, global single-mode low-loss MPO production will reach 17,591,000 units, with an average selling price of US$6.43 per unit. Production capacity will be 24,097,000 units, with a capacity utilization rate of 73% and a gross profit margin of 37%.
