Single-Mode Pump Protector is an optical passive device used to protect single-mode fiber lasers or fiber amplifiers from interference and damage from the reverse pump light generated by the laser itself. By utilizing optical components such as narrowband filters and half-mirrors, it reflects the pump light back to its source while allowing the signal light to pass through, thereby isolating the pump light from affecting the laser's internal structure, ensuring laser stability and extending its lifespan.

The upstream core supply chain for Single-Mode Pump Protector includes suppliers of key raw materials and components, such as optical crystal materials, semiconductor pump laser chips, specialty optical fibers, precision optical coating materials, and metal packaging bases. Downstream, they directly connect with fiber laser manufacturers, fiber amplifier manufacturers, and optical communication module companies.
