The global Single-Phase Direct Liquid Coolingn (DLC) System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Direct Liquid cooling (DLC) uses a liquid, such as water, or a refrigerant, rather than air, to cool the data center. By allowing the cooling solution to be brought closer to the heat source, it operates in a more effective manner in terms of power consumption. Processors can operate significantly faster using this method compared to other traditional and conventional means.

By adopting Direct Liquid Cooling alongside with air-cooling strategies, data centers can improve their Power Usage Effectiveness (PUE) and reduce energy consumption, thus supporting the growing demand for HPC.
