Single-phase Shaded Pole AC Motor, also known as shaded pole motor or shaded pole motor, is a single-phase AC asynchronous motor. It usually adopts cage-type skewed slot cast aluminum rotor and is composed of rotor and stator. The rotor includes shaft, rotor core, rotor winding, etc.; the stator includes base, stator coil, stator core, etc. The single-phase shaded pole AC motor generates a rotating magnetic field through the short-circuit ring (winding) on ??the stator magnetic pole, so that the rotor can realize self-starting operation. The core feature is that it does not require starting capacitor or centrifugal switch, and only relies on the spatial phase difference between the main winding and the shaded pole winding to generate starting torque. It is widely used in small machinery, instruments and equipment, household appliances and other fields.

United States market for Single-phase Shaded Pole AC Motor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
