Single point triangulation sensors use triangulation principles to measure the distance to an object using only one point of light. The basic idea is to point a point light source at the object to be measured and analyze the position of the reflected light to determine the distance. These single point sensors are useful in situations where it is necessary to measure the distance to an object accurately and at high speed.

The global Single Point Laser Distance Sensors market size is projected to grow from US\$ 835.4 million in 2023 to US\$ 1206.8 million in 2030; it is expected to grow at a CAGR of 5.4% from 2024 to 2030.
