Single-polarization fibers are a type of specialty optical fiber that are designed to transmit light only in a specific polarization direction. In these fibers, light in other polarization directions either does not meet the guiding conditions or experiences significant optical loss. This unique property makes single-polarization fibers ideal for applications requiring precise polarization control, such as in high-performance fiber optic communication systems and sensing technologies.

The global Single-polarization Fibers market size is projected to grow from US\$ 146 million in 2024 to US\$ 194 million in 2030; it is expected to grow at a CAGR of 4.8% from 2024 to 2030.
