Single pole double throw relay, also known as SPDT solid state relay, or one open one closed solid state relay, and normally open normally closed solid state relay. Since all switching components in a solid state relay function only as a single pole single throw switch (SPST), and no single component in a solid state relay has a single pole double throw (SPDT) function, the input control circuit of the solid state relay is electrically isolated from its output circuit. Therefore, if SPDT solid state relays are needed, we can

only use special circuits to modify the SPDT switch to achieve the SPDT function. Due to the electronic switching elements, SPDT solid state relays are more efficient and consume less power than SPDT mechanical relays.
