Single roller ironing machine is a kind of equipment used for surface treatment of textiles. It mainly makes the surface of fabrics smooth and flat by heating and calendering. Its core component is a high-temperature heated roller. When the fabric passes through the roller, the heat and pressure make the fiber surface flat and produce gloss, thus improving the appearance and touch of the fabric. Single roller ironing machine is widely used in the finishing process of various fabrics such as cotton, linen, chemical fiber, etc. It is often used in the treatment of fabrics such as home textiles, clothing and industrial fabrics to improve the gloss, feel and wrinkle resistance of the fabric.
