Single room mini split system is a high-efficiency cooling/heating air conditioning system that does not require air ducts. It consists of an indoor unit and an outdoor unit, which are connected by refrigerant pipes and are dedicated to providing temperature control for an independent space (such as a bedroom, office, studio, etc.). This system usually uses variable frequency compression technology, which has the advantages of high energy efficiency, low noise, and flexible installation. It is especially suitable for space renovation, new air conditioning areas, or building structures where traditional air ducts cannot be installed. Compared with multi-zone systems, single room mini split systems have a simpler structure and lower cost. They are widely used in residential, apartment and light commercial environments. It is one of the most widely used solutions in ductless air conditioning systems.
