Single-Rotor Rotary Rake: A single-rotor rotary rake is an agricultural machine used for gathering and bundling crop residues, such as straw and hay, after harvesting. It consists of a primary cutting unit with one or multiple cutting blades attached to a rotating shaft. As the rot spins, the blades cut the crop residues and collect them into windrows, which are then formed into bundles or ricks for easy handling and removal from the field. This equipment is often attached to a tractor and can be used for various crops, including wheat, corn, oats, and others. It provides a quick and efficient way to manage crop residues, which can be beneficial for soil health, reducing erosion, and providing livestock feed.

The global Single-Rotor Rotary Rake market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
