A single-row modular data center is a modular infrastructure architecture based on a single row of server racks combined with enclosed hot/cold aisle containment and prefabricated integrated infrastructure systems. It integrates racks, power distribution, cooling systems, cabling, and monitoring into factory-built modules that can be rapidly deployed as a single-row unit. It is characterized by compact footprint, fast deployment, and scalable expansion, while significantly improving energy efficiency (PUE) through enclosed airflow design. It is widely used in edge computing, small-to-medium data centers, enterprise IT upgrades, and industry-specific computing nodes, and is rapidly expanding with the growth of cloud computing and AI workloads.

The upstream of single-row modular data centers includes IT hardware, power supply systems, cooling equipment, and structural component providers such as Schneider Electric, Vertiv, Huawei, Delta Electronics, and ABB. The midstream consists of modular data center integrators and solution providers such as Hewlett Packard Enterprise, Dell Technologies, Huawei, and Inspur, responsible for rack integration, micro-module design, and system deployment. Downstream applications include cloud service providers, internet companies, financial institutions, telecom operators, and enterprise IT infrastructure such as Amazon Web Services, Microsoft, and Google.
