The global Single-shaft Crusher market size is predicted to grow from US\$ 868 million in 2025 to US\$ 1269 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2025, global sales of single-shaft crushers reached 14,200 units, with an average selling price of US\$62,500 per unit. Global production capacity was approximately 18,500 units, and the industry's average gross profit margin was about 28%. A single-shaft crusher is an industrial solid waste crushing equipment with a single main shaft cutter roller as its core working component. It typically consists of a frame, cutter roller, fixed cutters, a hydraulic feeding system, a reducer, a motor, a screen, a control cabinet, and safety protection devices. It primarily uses low-speed, high-torque shearing, tearing, and extrusion methods to crush plastic blocks, films, wood, rubber, paper, textiles, electronic waste, municipal solid waste, and industrial scraps into recyclable or easily processed granular materials.

Upstream raw materials mainly include alloy steel cutters, wear-resistant steel plates, castings and forgings, reducers, motors, hydraulic systems, bearings, PLC controllers, and electrical components. Downstream suppliers mainly include recycled plastic companies, solid waste treatment plants, paper and wood recycling companies, electronic waste dismantling companies, rubber and tire recycling companies, and environmental engineering integrators.

With the advancement of policies promoting the circular economy, recycling of renewable resources, waste sorting, and reduction of industrial solid waste, the demand for single-shaft crushers has maintained steady growth. Future prospects lie in high wear-resistant cutting tools, intelligent load adjustment, low-energy transmission, automatic reverse anti-blocking, modular maintenance, and integration with sorting, cleaning, and granulation production lines, bringing continuous business opportunities

to crushing equipment manufacturers, cutting tool suppliers, environmental engineering contractors, and renewable resource operators.

The single-shaft crusher market is showing steady growth, driven by increasing demand from the circular economy, plastic recycling, industrial solid waste reduction, waste sorting, and renewable resource utilization. As an important branch of industrial crushing equipment, single-shaft crushers are widely used in the pre-processing of plastic blocks, films, wood, paper, rubber, electronic waste, and industrial scraps, and are particularly suitable for recycling lines with requirements on output particle size, processing stability, and subsequent granulation/sorting.

Both the global industrial crusher and recycling equipment markets are growing. Data shows that industrial crushing equipment growth is driven by waste treatment needs, the circular economy, and technological innovation, while the growth of the recycling equipment market is closely related to sustainable recycling awareness, environmental regulations, and investment in waste management infrastructure. Future competition will shift from simple equipment prices to factors such as cutter wear life, low-energy transmission, anti-winding and anti-clogging design, automatic reverse protection, intelligent load control, easy-to-maintain structure, and overall line integration capabilities. Regionally, the European and North American markets are dominated by equipment upgrades, environmental compliance, and high-end automated production lines, while the Asia-Pacific market is driven by plastic recycling, manufacturing scrap processing, and environmental investment, showing stronger growth potential.

Overall, the single-shaft crusher market has long-term rigid demand, but the low- and mid-range products are obviously homogenized. If companies can develop advantages in high-torque low-speed crushing, modular cutter boxes, intelligent monitoring, low-noise dust reduction, and linkage with cleaning, granulation/sorting systems, they will be more likely to win orders from customers in the recycled plastics, solid waste treatment, and environmental engineering sectors.
