The global Single Shutoff Coupling market size is predicted to grow from US\$ 2598 million in 2025 to US\$ 4260 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

A Single Shutoff Coupling is a type of quick-connect fluid coupling that incorporates an automatic shutoff valve on only one side (either the male or female half). When the coupling is disconnected, the valve on that side closes automatically to prevent fluid leakage, while the other side remains open or non-valved. It is commonly used in liquid transfer, cooling systems, and gas handling applications to improve connection efficiency and minimize fluid loss. In 2025, global Single Shutoff Coupling production reached approximately 241 M units, with an average global market price of around US\$ 11 per unit. Annual production capacity is 270 M units. Gross Profit Margin: 22%. The industry chain of Single Shutoff Couplings is relatively mature and clearly structured. Upstream mainly includes raw material suppliers such as stainless steel, brass, aluminum, and engineering plastics, as well as precision machining and sealing component providers (e.g., O-rings). Midstream manufacturers focus on design, CNC machining, assembly, and testing, where product reliability and leakage control are critical competitive factors. Downstream applications are broad, covering industrial equipment, hydraulic systems, data center liquid cooling, medical devices, and automotive fluid systems. In recent years, demand from high-growth sectors such as liquid cooling and automation has been driving a shift toward higher-performance and higher-value products. The Single Shutoff Coupling market will continue to grow steadily, but the real value lies in high-end segments rather than volume expansion. While low-cost, standardized products dominate shipment volume, profit margins are increasingly concentrated in applications requiring low leakage, high reliability, and quick maintenance, such as data centers and medical systems. In the future, manufacturers

that can improve sealing technology, material performance, and system integration capabilities will gain a stronger competitive advantage. Additionally, there is clear potential for emerging manufacturers, especially in Asia, to move up the value chain as they invest more in technology and quality.

United States market for Single Shutoff Coupling is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
