Single-sided Flexible PCB, using single-sided PI copper clad laminate, generally rolled copper foil, chemically etched conductive patterns, and then covered with a sided of covering film after the circuit is completed (strictly speaking, single-sided flexible PCB can be manufactured with or without With a cover sided or other protective coating. The cover sided or protective layer plays the role of protecting the circuit, usually located on the “top sided” of the flexible circuit), forming a flexible circuit board with only a single

sided of conductors. Single-sided flexible PCB is the simplest and lowest manufacturing cost among flexible circuit boards. When single-sided wiring, single-sided flexible PCB should be selected. Therefore, a single-sided flexible PCB has huge cost-effectiveness.
