A Single-Sided Flying Probe Tester is a type of electronic testing machine used to inspect printed circuit boards (PCBs) by accessing test points on only one side of the board at a time. It uses movable probes (or ?flying? probes) that contact specific test points to detect faults, such as open circuits, shorts, and incorrect component values. Single-sided flying probe testers are valuable in electronics manufacturing for providing a flexible, fixtureless testing solution, particularly for prototype testing or small production batches.
