The single-sided three-hand glove box is an experimental equipment designed for operations in a specific environment (such as oxygen-free, low-oxygen, dust-free or specific gas atmosphere). The single-sided three-hand glove box is a glove box with a single operating surface, which is equipped with three independent glove ports, allowing three operators or a single operator to use three hands to operate at the same time. This design is intended to improve the flexibility and efficiency of experimental operations while ensuring the cleanliness and stability of the internal environment of the box. Compared with conventional single-glove port or double-glove port glove boxes, the biggest feature of the single-sided three-hand glove box is its three independent glove ports. This increases the diversity and parallelism of operations, allowing operators to perform multiple experimental tasks at the same time or collaborate to complete complex experimental processes.
