The report requires updating with new data and is sent in 48 hours after order is placed.

According to our LPI (LP Information) latest study, the global Single Sign-on market size was valued at US$ 1360.9 million in 2023. With growing demand in downstream market, the Single Sign-on is forecast to a readjusted size of US$ 3450 million by 2030 with a CAGR of 14.2% during review period.

The research report highlights the growth potential of the global Single Sign-on market. Single Sign-on are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Single Sign-on. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Single Sign-on market.

Single sign-on (SSO) is an authentication capability that lets users access multiple applications with one set of sign-in credentials. Enterprises typically use SSO to provide simpler access to a variety of web, on-premises, and cloud apps for a better user experience. It can also give IT more control over user access, reduce password-related help desk calls, and improve security and compliance.

Today, applications are deployed across data centers and clouds, and being delivered as SaaS. Every business application requires users to be authenticated before they are given access to a resource. In the pre-SSO days, every time a user needed to move between applications, they had to sign in with a set of credentials. Most of the time, every application had a separate set of credentials, and it resulted in poor user

experience, failed sign-ins as a result of forgotten credentials, inconsistent access control policies, and higher cost to support these applications.

SSO has simplified the way users interact with and access their applications. With SSO, users can save time by accessing all their VDI, enterprise, web and SaaS applications, as well as other corporate resources like network file shares with only one set of credentials.
