The global Single Stage Chiller market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Single Stage Chiller is a type of refrigeration system that operates through a single cooling cycle to lower the temperature of a fluid. Unlike multi-stage chillers, which use multiple compression stages for enhanced efficiency or capacity control, a single stage chiller employs one compressor to cool the refrigerant, which in turn absorbs heat from the process fluid. This simplified configuration makes it suitable for applications where consistent and moderate cooling needs are required, offering a cost-effective solution for industrial and commercial cooling processes.
