The global Single Stage Double Suction Centrifugal Pump market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The single-stage double-suction centrifugal pump is a centrifugal pump designed to handle large flow rates of liquid. It has two liquid inlets and can suck liquid from both sides of the pump at the same time, thereby reducing the load on the impeller and increasing the flow rate and efficiency of the pump. Its single-stage design means that only one impeller completes the pressurization process of the liquid, making its structure relatively simple and suitable for medium pressure applications. Due to the double-suction design, the pump runs more smoothly with lower noise and vibration.
