The global Single Stage Single Suction Centrifugal Pump market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The single-stage single-suction centrifugal pump is a common type of centrifugal pump, which is widely used in conveying clean liquids. It uses an impeller to increase the kinetic energy and pressure of the liquid, and uses centrifugal force to suck the liquid from one side of the pump and discharge it from the outlet. Due to the single-suction design, the liquid only enters from one side of the impeller, which is suitable for conveying medium-flow clean water or similar liquids. The pump has a simple structure, small size, light weight, low cost, and easy operation and maintenance.
